- Safety / Braille & Tactile Signs
- Dimensional Letters

FASTSIGNS® is a full-service sign and graphics company, providing design, consulting, production, delivery and installation, all under one roof. From large-scale project management to vehicle wraps to wide-format poster and banner printing, our prices are competitive – for large or small quantities and for products of any size. We can handle whatever you need in banners, exhibits and displays, site signs, labels and decals, window and vehicle graphics, full colour digital posters, point-of-purchase signs, illuminated or architectural signs, safety/ADA signs, dimensional letters and more. We have state-of-the-art technology in-house, including thermal, aqueous and solvent printers that can produce interior and exterior full colour graphics. In fact we've recently added an engraver capable of producing Braille and tactile signs for all your architectural needs. To stay on top of technological advances in our industry, the FASTSIGNS® team spends a substantial amount of time getting trained on new technologies and how to apply them to produce sign and graphics solutions for our customers. Just as technology is the cornerstone of our sign production, it's also the foundation of our customer service. Our customers can request a quote, send us a file and even proof their project online. We can work with Mac or PC files, in virtually any native software, or take customer files and precisely output them to specifications. Even

with all our technology, we don't lose that personal touch that keeps our customers coming back.
